Annual Indexes
Volume 14—October 1984 to April 1985

1. Subject Index

A

Abstracts—English/French/Spanish 547, 670
Accommodation and convergence under high pressure sodium illumination 81
Acoustic resonance phenomena in low wattage metal halide lamps 633
Analysis of a visual performance experiment 448
An evaluation of computer graphic images of the lighted environment 493
An evaluation of lighting systems for the electronic office 220
An illuminance survey and analysis of partitioned spaces 63
An improved metal halide lamp with high color rendering properties ... 206
The application of computer graphics in lighting design 6
Applications, Photometry for near field 262
A predictive theory of power balance in incandescent lamps 581
A statement on astronomical light pollution and light trepass 658

B

Ballast characteristic curve parameters, Estimation of HPS lamp voltage rise as a function of 157
Ballast combinations, Performance characteristics of fluorescent lamp and 162
Ballasting the miniature metal halide lamp 191
Ballast systems, Computer simulation of fluorescent lamp 145
Ballasting the miniature metal halide lamp II 256
Behavior responses to a flexible desk luminaire 174

C

Calculation of contrast, Methods for the 277
Calculation of discharge capsule size, Energy balance of low wattage single-ended metal halide lamps and the method of 64
Calculations in obstructed spaces, Interior point-by-point 14
Calculations of daylight availability, IES approved recommended practice for the 322
Capacity of illumination, Color rendering 270
Cavity approximation, On the nonrectangular 107
Coefficients of utilization for illuminance and exitance in long, narrow spaces 4
Color acceptability, A new high pressure sodium lamp with 341
Color photographic purposes, The design and evaluation of discharge lamps for 71
Color rendering capacity of illumination 270
Color temperature metal halide lamp, Increased red output, low 359
Compact lamp with two interior fluorescent tubes 298
Computer simulation of fluorescent lamp/ballast systems 145
Configuration factor method to strip sources, Extension of the 290
Contrast, Methods for the calculation of 277
Convergence under high pressure sodium illumination, Accommodation and 81
Criteria for residential areas, New lighting 350
Criterion for energy-effective tunnel lighting design, Vertical illuminance as a 230

D

Daylight availability, A general illuminance model for 330
Daylight availability, IES approved recommended practice for the calculations of 322
The derivation of a new area-source equation 314
The design and evaluation of discharge lamps for color photographic purposes 71
Determining lamp/ballast system performance with a temperature-controlled integrating chamber ... 364
Design for a controlled traffic environment, Programmable highway lighting 258
Design, Monte Carlo procedures in lighting 368
Design of energy efficient natural and artificial lighting systems, Energy nomographs as an educational tool for 198
Design, Vertical illuminance as a criterion for energy-effective tunnel lighting 230
Development of protractors for calculating the effects of daylight from clear skies 649
Diameters, Fluorescent system performance of F40T12 and smaller lamp 47
Dimming of the 26 mm diameter fluorescent lamps 603
Direct current operation of low wattage metal halid lamps 264
Disability glare in roadway lighting, The mitigation of 56
Discharge capsule size, Energy balance of low wattage single-ended metal halide lamps and the method of calculation of 64
Discharge lamps for color photographic purposes, The design and evaluation of 71
Discomfort glare from automobile headlights 296
Discomfort glare; luminance range-limited replication study of angularly small sources 396

E

Educational tool for design of energy efficient natural and artificial lighting systems, Energy nomographs as an 198
The effect of a heater on the initiation of discharges in high pressure gases 240
Effective tunnel lighting design, Vertical illuminance as a criterion for energy 230
Efficiency increase of light sources by infrared reflecting filters 151
Efficient natural and artificial lighting systems, Energy nomographs as an educational tool for design of energy 198
Electrode phenomena in metal halide lamps 94
Electrodes, Thermal balance of HID 304
Electronic ballast for fluorescent lamp lighting system of 100 lm/W overall efficiency 225
Electronic office, An evaluation of lighting systems for the 220
Emerging lighting control technologies the alternatives and trade-offs ... 624
Energy balance of low wattage single-ended metal halide lamps and the method of calculation of discharge capsule size 64
Energy-effective tunnel lighting design, Vertical illuminance as a criterion for 230
Energy nomographs as an educational tool for design of energy efficient natural and artificial lighting systems 198
Environment, Programmable highway lighting design for a controlled traffic 258
Equation, The derivation of a new area-source 314
Estimation of HPS lamp voltage rise as a function of ballast characteristic curve parameters 157
Evaluation of discharge lamps for color photographic purposes, The design and 71
Evaluation of lighting systems for the electronic office, An 220
Extension of the configuration factor method to strip sources 290

F

Factor method to strip sources, Extension of the configuration 290
Field applications, Photometry for near 262
Filament switch for wattage saving in fluorescent lamps 315
Fluorescent lamp and ballast combinations, Performance characteristics of 162
Fluorescent lamp/ballast systems, computer simulation of 145
Fluorescent lamp operating characteristics at high frequency 211
Fluorescent lamp starting voltage relationships at 60 HZ and high frequency 36
Fluorescent lamps with altered mercury isotopic distributions, Investigation of 89
Fluorescent system performance of F40T12 and smaller lamp diameters 47
Further evaluation of roadway lighting using the visual model of CIE 19/2 421

G

A general illuminance model for daylight availability 330
Glare in roadway lighting, The mitigation of disability 56

H

Halide lamp, Ballasting the miniature metal 191
Halide lamp, Increased red output, low color temperature metal 359
Halide lamps and the method of calculation of discharge capsule size, Energy balance of low wattage single-ended metal 64
Halide lamps, Electrode phenomena in metal 94

Annual Indexes
Volume 14—October 1984 to April 1985

1. Subject Index

A

Abstracts—English/French/Spanish 547, 670
Accommodation and convergence under high pressure sodium illumination 81
Acoustic resonance phenomena in low wattage metal halide lamps 633
Analysis of a visual performance experiment 448
An evaluation of computer graphic images of the lighted environment 493

Discharge capsule size, Energy balance of low wattage single-ended metal halide lamps and the method of calculation of 64
Discharge lamps for color photographic purposes, The design and evaluation of 71
Discomfort glare from automobile headlights 296
Discomfort glare; luminance range-limited replication study of angularly small sources 396

E

Educational tool for design of energy efficient natural and artificial lighting systems, Energy nomographs as an 198
The effect of a heater on the initiation of discharges in high pressure gases 240
Effective tunnel lighting design, Vertical illuminance as a criterion for energy 230
Efficiency increase of light sources by infrared reflecting filters 151
Efficient natural and artificial lighting systems, Energy nomographs as an educational tool for design of energy 198
Electrode phenomena in metal halide lamps 94
Electrodes, Thermal balance of HID 304
Electronic ballast for fluorescent lamp lighting system of 100 lm/W overall efficiency 225
Electronic office, An evaluation of lighting systems for the 220
Emerging lighting control technologies the alternatives and trade-offs ... 624
Energy balance of low wattage single-ended metal halide lamps and the method of calculation of discharge capsule size 64
Energy-effective tunnel lighting design, Vertical illuminance as a criterion for 230
Energy nomographs as an educational tool for design of energy efficient natural and artificial lighting systems 198
Environment, Programmable highway lighting design for a controlled traffic 258
Equation, The derivation of a new area-source 314
Estimation of HPS lamp voltage rise as a function of ballast characteristic curve parameters 157
Evaluation of discharge lamps for color photographic purposes, The design and 71
Evaluation of lighting systems for the electronic office, An 220
Extension of the configuration factor method to strip sources 290

F

Factor method to strip sources, Extension of the configuration 290
Field applications, Photometry for near 262
Filament switch for wattage saving in fluorescent lamps 315
Fluorescent lamp and ballast combinations, Performance characteristics of 162
Fluorescent lamp/ballast systems, computer simulation of 145
Fluorescent lamp operating characteristics at high frequency 211
Fluorescent lamp starting voltage relationships at 60 HZ and high frequency 36
Fluorescent lamps with altered mercury isotopic distributions, Investigation of 89
Fluorescent system performance of F40T12 and smaller lamp diameters 47
Further evaluation of roadway lighting using the visual model of CIE 19/2 421

G

A general illuminance model for daylight availability 330
Glare in roadway lighting, The mitigation of disability 56

H

Halide lamp, Ballasting the miniature metal 191
Halide lamp, Increased red output, low color temperature metal 359
Halide lamps and the method of calculation of discharge capsule size, Energy balance of low wattage single-ended metal 64
Halide lamps, Electrode phenomena in metal 94

Halide lamp with high color rendering properties, An improved metal ... 206
Halide projection lamp, A metal 131
Headlights, Discomfort glare from automobile 296
HID electrodes, Thermal balance of . 304
High frequency characteristics of 32 watt T8 lamps 26
High frequency operation of low sodium lamps 188
High mast lighting impact on driver's visibility, traffic performance and illumination cost 379
High pressure sodium illumination, Accommodation and convergence under 81
High presaure sodium lamp with color acceptability, A new 341
HPS lamp voltage rise as a function of ballast characteristic curve parameters, Estimation of 157

I

IES approved method for photometric testing of ourdoor fluorescent luminaires 322
IES approved lighting for parking facilities 616
IES approved recommended practice for the calcualtions of daylight availability 322
IES guide for photometric testing of searchlights 372
Illuminance and exitance in long, narrow spaces, Coefficients of utilization for 4
Illuminance and luminance distribution, Influence of objects in rooms on 308
Illuminance as a criterion for energy-effective tunnel lighting design, Vertical 230
Illuminance model for daylight availability, A general 330
Illumination, Accommodation and convergence under high pressure sodium 81
Illumination, Color rendering capacity 270
Incandescent lamps, A new method for predicting the initial performance of miniature 122
Increased red output, low color temperature metal halide lamp 359
Influence of objects in rooms on illuminance and luminance distribution 308
Interpolation of intensity distributions 27
Interior point-by-point calculations in obstructed spaces 4
Investigation of fluorescent lamps with altered mercury isotopic distributions 89
Isotopic distributions, Investigation of fluorescent lamps with altered mercury 89

L

Lamp, A metal halide projection 131
Lamp and ballast combinations, Performance characteristics of fluorescent 162
Lamp, Ballasting the miniature metal halide 191
Lamp/ballast systems, Computer simulation of fluorescent 145
Lamp diameters, Fluorescent system performance of F40T12 and smaller 47
Lamp, Increased red output, low color temperature metal halide 359
Lamps and the method of calculation of discharge capsule size, Energy balance of low wattage single-ended metal halide 64
Lamps, A new method for predicting the initial performance of miniature incandescent 122
Lamps, Electrode phenomena in metal halide 94
Lamps for color photographic purposes, The design and evaluation of discharge 71
Lamps, High frequency characteristics of 32 watt T8 26
Lamp starting voltage relationships at 60 HZ and high frequency, Fluorescent 36
Lamps with altered mercury isotopic distributions, Investigation of fluorescent 89
Lamp voltage rise as a function of ballast characteristic curve parameters, Estimation of HPS 157
Lamp with color acceptability, A new high pressure sodium 341
Lamp with high color rendering properties, An improved metal halide . 206
Lighting criteria for residential areas, New 350
Lighting design for a controlled traffic environment, Programmable highway 258
Lighting design, Monte Carlo procedures in 368
Lighting design, Vertical illuminance as a criterion for energy-effective tunnel 230
Lighting systems, Energy nomographs as an educational tool for design of energy efficient natural and artificial 198
Lighting systems for the electronic office, An evaluation of 220
Lighting, The mitigation of disability glare in roadway 56
Low pressure sodium lamps with a luminous efficacy of 200 lm/W 607
Luminaire, Behavioral responses to a flexible desk 174
Luminaires, IES approved method for photometric testing of outdoor fluorescent 322
Luminance distribution, Influence of objects in rooms on illuminance and 308

M

Metal halide lamp, Ballasting the miniature 191
Metal halide lamp, Increased red output, low color temperature 359
Metal halide lamps and the method of calculation of discharge capsule size, Energy balance of low wattage single-ended 64
Metal halide lamps, Electrode phenomena in 94
Metal halide lamp with high color rendering properties, An improved 206
A metal halide projection lamp 131
Method for photometric testing of outdoor fluorescent luminaires, IES approved 322
Method for predicting the initial performance of miniature incandescent lamps, A new 122
Methods for the calculation of contrast 277
Method to strip sources, Extension of the configuration factor 290
Miniature incandescent lamps, A new method for predicting the initial performance of 122
Miniature metal halide lamp, Ballasting the 191
The mitigation of disability glare in roadway lighting 56
Mock HID lamp development 326
Monte Carlo procedures in lighting design 368

N

A new high pressure sodium lamp with color acceptability 341
New light source using microwave discharge 283
New lighting criteria for residential areas 350
A new method for predicting the initial performance of miniature incandescent lamps 122
Nomographs as an educational tool for design of energy efficient natural and artificial lighting systems, Energy . 198
Non-rectangular cavity approximation, On the 107
Non-uniformities in transient adaptation I: unrestricted background field 589

O

Office, An evaluation of lighting systems for the electronic 220
On the non-rectangular cavity approximation 107
On the error of zonal cavity calculations for indirect lighting 120
On zonal cavity applications 39
Optimum sensitivity to contrast vs. luminance 568

P

Performance characteristics of fluorescent lamp and ballast combinations 162
Photographic purposes, The design and evaluation of discharge lamps for color 71
Photometer for the evaluation of infrared reflective coated lamps 175
Photometric testing of outdoor fluorescent luminaires, IES approved method for 322
Photometric testing of searchlights, IES guide for 372
Photometry for near field applications 262
Positive column Hg-rare gas discharge model applicable to compact fluorescent lamps 306
Practical consequences of using relative visual performance to analyze lighting systems 466
Practical high efficiency tungsten-halogen lamps using IR reflecting films 165
Practice for the calculations of daylight availability, IES approved recommended 322
Pressure sodium illumination, Accommodation and convrgence under high 81
Pressure sodium lamp with color acceptability, A new high 341
Programmable highway lighting design for a controlled traffic environment 258
Projection lamp, A metal halide 131

Q

Quantifying reactions of visual display operators to indirect lighting 515

R

Reducing impurity gases in miniature metal lamps 284
Rendering capacity of illumination, Color 270
Rendering properties, An improved metal halide lamp with high color . 206
Residential areas, New lighting criteria for 350

Roadway lighting calculations in perspective 663
Roadway lighting, The mitigation of disability glare in 56

S

Searchlights, IES guide for photometric testing of 372
Simulation of fluorescent lamp/ballast systems, Computer 145
Sodium illumination, Accommodation and convergence under high pressure 81
Sodium lamp with color acceptability, A new high pressure 341
Sources, Extension of the configuration factor method to strip 290
Subtleties in flood light photometry . 347
System performance of F40T12 and smaller lamp diameters, Fluorescent 47
Systems, Computer simulation of fluorescent lamp/ballast 145
Systems, Energy nomographs as an educational tool for design of energy efficient natural and artificial lighting 198
Systems for the electronic office, An evaluation of lighting 220

T

Technical Committee Reports
IES Approved method for photometric testing of outdoor fluorescent luminaires 322

IES Approved recommended practice for the calculations of daylight availability 381
IES guide for photometric testing of searchlights 372

Thermal balance of HID electrodes . 304
Traffic environment, Programmable highway lighting design for a controlled 258

U

Utilization for illumination and existance in long, narrow spaces, Coefficients of 4

V

Vertical illuminance as a criterion for energy-effective tunnel lighting design 230
Visual clarity with a black-and-white scene 643
Voltage relationships at 60 HZ and high frequency, Fluorescent lamp starting 36
Voltage rise as a function of ballast characteristic curve parameters, Estimation of HPS lamp 157

W

Wattage single-ended metal halide lamps and the method of calculation of discharge capsule size, Energy balance of low 64
